

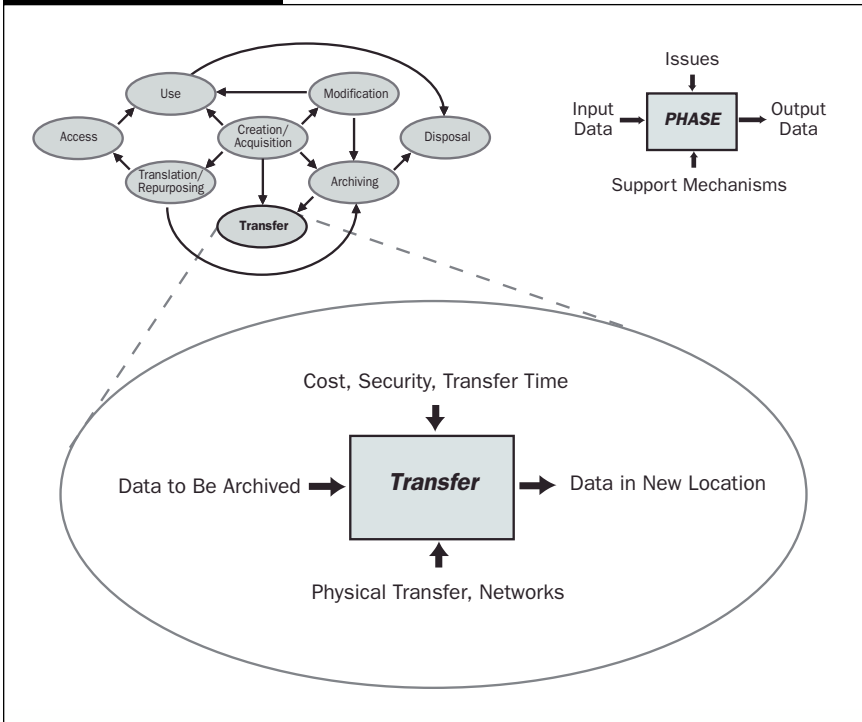

EXHIBIT 4.6

that support virtually instantaneous communications throughout the KM life cycle and shorten the transfer time. However, for some applications, including ultrasecure electronic digital information as well as digital media-based communications, physically delivering media from one point to the next is the way to transfer information.

Translation/Repurposing

In the translation/repurposing phase of the Knowledge Management life cycle, information is translated from its original form into a form more suitable for a new purpose. For example, a table of numerical data may be transformed into a three-dimensional graphic, a sound file might be translated into a graphic or sonogram, or the data in the table might be condensed into a concise statistical summary.
